

Data classes in Decision tree	
	Leaf: <ul style="list-style-type: none"> - predictions : Dictionary storing number of classes - prediction_label: Follows majority voting(Assigns class which is maximum in the leaf) - depth : depth of leaf node
	Dataset_partition_point: <ul style="list-style-type: none"> - column: column number where partition occurs - column_value: value of the column
	DecisionNode: <ul style="list-style-type: none"> - dataset_partition_point: Instance of it - true_branch: Reference to positive rows - false_branch: reference to negative rows - rows: part of the dataset after the split at this node.
